Claims 10 and 11 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 7.

Claims 1 and 3-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the "index plate means" and the "spring plate means" have not been sufficiently interconnected and located relative to the other elements and relative to each other in a manner to positively define the invention.

In claim 3, "said control handle" lacks definite antecedent basis.

In claims 6-8, there is no purpose or function attributed to the control cable and the control mechanism.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Chou et al.

Figures 1-10 show structure as claimed, including hub means having an index plate 1, and spring plate 2 having teeth thereon for engaging the index plate.

Art Unit: 3636

Note that a single tooth may be construed has a "lock pin", particularly in the embodiments shown in figures 8 and 10. Note also the handgrip 3 for controlling movement of the "lock pin".

Claims 3-9 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bush, King, Broderson et al and Chung show various features of the invention.
